Follow these simple steps to dispose of medicines in the household trash

MIX

Mix medicines (do not crush tablets or capsules) with an unpalatable substance such as dirt, kitty litter, or used coffee grounds.

PLACE

Place the mixture in a container such as a sealed plastic bag.

THROW

Throw the container in your household trash.

SCRATCH OUT

Scratch out all personal information on the prescription label of your empty pill bottle or empty medicine packaging to make it unreadable, then dispose of the container.

This information provided by:

The ASAP Opiate Task Force is a project of the Trumbull County Mental Health and Recovery Board. ASAP is a community coalition that has initiated efforts to build public awareness about the opiate epidemic. Members meet monthly to discuss ways to combat the problem and offer solutions.

Every day 1,700 new kids begin abusing opioids

Helpful Information about Prescription Drug Storage & Disposal

Lesson 1: Your Medicine. Their Drugs.

Prescription medicines taken properly help heal illness, relieve pain, control disease and bring balance to your life. But when others take your medications, they can be very dangerous. Every day, more than 1,700 children and young adults begin experimenting with prescription drugs.

Lesson 2: Your nightstand. Their drug supplier.

What's in your medicine cabinet? On your nightstand or the kitchen counter? In your purse? Adolescents believe that since the medicines were prescribed by a doctor, they provide an inexpensive, legal and "medically safe high." In the case of over-the-counter remedies, most children have been given these by their parents for fevers, colds and coughs. So, teens believe it is safe to take these drugs whenever they choose.

Lesson 3: Do not flush unwanted medications.

Do not flush prescription drugs down the toilet or drain unless the label or accompanying patient information specifically instructs you to do so. The best way to dispose of unwanted or expired medications is to take them to a drop box.

Why should families be concerned?

60% of Americans have unused opioid painkillers in their home

(DEA.gov/Headquarters News Releases, May 6, 2016)

86% increase in calls to US Poison Centers for pediatric exposure to opioids 2000-2009

(ScienceDaily Science News, Nationwide Children's Hospital, March 20, 2016)
